

KARAN SANJAY BAGAL

Full-Stack Developer — Next.js · TypeScript · Tailwind CSS · REST API Integration

+91 9767473321 | karanbagal021@gmail.com | linkedin.com/in/karanbagal01234 | github.com/LeviX-dev | Pune, India

SUMMARY

Full-stack developer currently building a **live, in-production Next.js 14 (App Router)** accounting platform for a real client — solo, from database to deployment. Built the invoice, purchase, and payment tracking flow with **TypeScript end-to-end**, **Tailwind CSS**, and a **PostgreSQL + Prisma** data layer, combining Next.js API routes with a separate backend service. Also own a **60+ endpoint REST API platform** (RBAC, attendance, expense tracking) currently in production, and built a **sub-100ms REST API** layer for an AI-matching engine. 1st Runner-Up out of 48 teams at AMC College Hackathon, and 100+ LeetCode problems solved.

TECHNICAL SKILLS

- **Frontend:** Next.js 14 (App Router), React.js, TypeScript, Tailwind CSS, Responsive/Component Design
- **API Integration:** REST API design & consumption, Next.js API routes, Prisma-backed data APIs, JWT-secured endpoints, async/await data fetching
- **Backend:** Node.js, Express.js, Spring Boot — used alongside Next.js API routes in a mixed-backend architecture
- **Database & ORM:** PostgreSQL + Prisma ORM, MySQL, MongoDB — schema design, normalization, relational integrity
- **Auth & Security:** JWT Authentication, RBAC (role-based multi-user access), session management
- **DevOps & Tools:** Git, GitHub Actions (CI/CD), Docker, AWS (EC2, S3), Vercel, Postman

PROJECTS

Invoicing & Purchase Management Platform — Live Client Project · Sole Developer

Next.js 14 (App Router) · TypeScript · Tailwind CSS · PostgreSQL · Prisma ORM · REST APIs

- Independently built and shipped a **full-stack accounting platform for a real client, live in production** — owned the entire lifecycle solo: database schema, API layer, and UI, with no other engineers on the project.
- Built the complete invoice lifecycle (create → send → track) and a full purchase-order tracking flow, using a **mixed backend of Next.js API routes and a dedicated backend service** to separate business logic from the UI layer.
- Implemented **payment tracking and reporting** with role-based **multi-user access**, giving each user type (admin/accountant/client) a scoped dashboard view over invoices, purchases, and payment status.
- Built the entire UI in **Tailwind CSS** with **TypeScript enforced end-to-end** — from Prisma-generated database types through API responses to React components — reducing runtime type-mismatch bugs common in JS-only stacks.
- Used **Prisma ORM over PostgreSQL** to design and migrate a relational schema linking invoices, purchases, and payments, keeping referential integrity intact across every transaction.
- Handled the project end-to-end for a paying client — requirements, architecture decisions, and production deployment — without a team, delivering a system real users rely on daily.

Aura-Match — AI Recruitment & Matching Engine github.com/LeviX-dev/aura-match

React · TypeScript · Spring Boot · Node.js · MySQL · Ollama LLM · AWS EC2/S3

- Built a **React + TypeScript real-time dashboard** consuming a REST API layer with **sub-100ms response times**, surfacing AI-generated candidate match scores from an Ollama LLM semantic-similarity engine.
- Designed the API integration layer end-to-end — from Spring Boot endpoints to typed frontend data fetching — plus a normalized MySQL schema (3NF) that eliminated N+1 query patterns.

Seamless QR Checkout — Distributed Payment System 1st Runner-Up / 48 Teams — AMC Hackathon

React · Node.js · MongoDB · TypeScript

- Built a QR-based contactless payment web app in **24 hours**, integrating the full payment API flow from React frontend to Node.js/Express backend.
- Reduced a 5-step POS checkout to 2 actions (scan → confirm) — a **60% friction reduction** — while designing a MongoDB schema that eliminated race conditions under concurrent transactions.

EXPERIENCE

Junior Software Developer — Myospaz Software Technologies Pvt. Ltd.

Mar 2026 – Present

- Work across the stack from PostgreSQL/MySQL schema design to REST API endpoints to the React screens that consume them, shipping features on a live product.

EDUCATION

B.Sc. Computer Science — Savitribai Phule Pune University, Pune

2022 – 2025 | Coursework: DSA · OOP · DBMS · Operating Systems · Computer Networks · Software Engineering

ACHIEVEMENTS & CERTIFICATIONS

- 1st Runner-Up, AMC College Hackathon (48 teams) — production-ready distributed payment system shipped in 24 hours.
- LeetCode 100+ solved (50 Easy · 40 Medium · 10+ Hard) · FreeCodeCamp: JavaScript Algorithms & Data Structures — Verified Certificate.
